

Grading Rubric

Final App Ideas:

- 0.5 Implement Core Data so that you have at least two entities linked together by a Core Data relationship.
- 1 Implement at least two UIViewController subclasses.
- 1 Include a UITableView that displays the data persisted in Core Data.
- 1 Add data to the database from an interface.

Additional items

There's only one entity with no Core Data relationships.

I like the added ability to mark something as important.

You can sort important todos by adding a descending Sort Descriptor on "important" (should be called isImportant).

When adding new important todos to the UITableView's Data Source array, just insert it at the beginning.

Grade: 90
