ASSIGNMENT 2

- APP DESIGN #1

This app is an interior design note app to put down list of home decorations for new homes.

1. The app offers some interior design apps but i don't think they have anything that lets you make a list for every room.

2. The app is targeted for home buyers, renters, realtors who are trying to write down everything they need for their house.

3. It will require a database to store all the inputs, GPS to use your location and find your home and bluetooth to share with others.

4. Free app because i still have no idea how to price/put value on something like this.

- APP DESIGN #2

This app idea is a friend finder. Kind of like swiping right and left for dating apps, this is an app that lets you hang out with someone if you need a friend.

1. I think there might be apps around for that, for example · Bumble but this one will let you book a friend for an activity.

2. This app is for everyone who might want some company from time to time. Like an uber but for people.

3. It will need internet connectivity, GPS to get locations and a database to store data.

4. Keep the app free with additional charges to unlock for extra features.

①

CONGRATS!

YOUR FRIEND IS

BOOKED!

RETURN HOME!

-APP DESIGN #3

This app is a place where people can track all devices in their home to keep track of usage and list.

1. I am sure there are similar apps like this but this app will let you add/remove devices, update information and keep a list in one place.

2. This app is targeted to tech savvy people who want to have access to all their devices in only one place.

3. It will need internet connectivity, a database to store data, bluetooth to communicate with possible devices and a GPS, CAMERA.

4. Keep the app free and charge a subscription every month.
